///ENDS 108

Design and Communication Foundations I. Approaches to problem identification and problem-solving emphasizing human, physical and cultural factors influencing architectural design. Understanding of space, materiality, and tectonics in a human body scale. Further development of drawing methods with emphasis on analytical drawing. Reinforcement of visual and verbal communication as applied to design processes.

///ARCH 205

Issue and methods in designing environments for human habitation and well-being; projects addressing site, functional planning, spatial ordering, form generation through a recognition of the synthesis of space, structure, use and context; reinforcement of appropriate graphic and model building techniques.

///ARCH 206

Fundamental issues of innovative design processes and creation explored through the creative use of past, present and future materials, tools, and technologies; with an emphasis upon the research of materials, methods, scale, craft and technique as instruments of design, fabrication, and production.

///ARCH 305

Integration of architectural theories and philosophy with environmental design systems; study of theoretical approaches to graphic and analytical thinking, problem identification and design dissemination through various media, case studies and problem resolution; conditions and forces associated with a variety of building types and the generation design solutions.

///ARCH 645

Advanced topics in architectural theory emphasizing historical development and relation to practice, including case studies from both western and non-western traditions; topics vary each semester.

///ARCH 610

Investigation and practice of various communication techniques used to explore, verify and present design decisions in architecture; freehand drawing principles; graphic theory and mechanical drawing techniques; architectural presentation and rendering

methods in different media and their application.

///ARCH 489

Investigation of modern and contemporary Latin American Architecture. Use of case studies to examine the production of representative architects and movements, aspects of architectural history, theory, design, and culture.
